

**PRESS RELEASE****Energy Answers Receives Final Air Permit from  
Puerto Rico Environmental Quality Board**

ALBANY, NY, October 30, 2014 - Energy Answers confirmed today that the Environmental Quality Board of Puerto Rico (EQB) granted the Air Quality Location and Construction Final Permit for its proposed Resource Recovery Facility (Waste to Energy) to be built in Arecibo, which represent an investment of \$ 750 million.

Energy Answers vice-president and project manager, Mark J. Green, described the final determination of the Board as a great achievement for the company and project development team, which occurs after an extensive and responsible analysis by this agency. "The Environmental Quality Board permit comes after a rigorous and thorough scientific analysis, which included extensive public participation and evaluation by the agency's technical staff and personal inspection of other similar facilities in the United States", said Green.

In addition, the representative of Energy Answers added that the permit follows the issuance of the Final Federal Environmental Protection Agency (EPA) air permit earlier this year. "With the final EPA air permit, and now the final EQB permit, it is confirmed, without doubt, that this operation is safe for Puerto Rico, protects human health and the environment and complies with all applicable local and federal regulations. Additionally, the project is now one step closer to creating extensive employment opportunities in the Arecibo region and generating economic activity that will benefit many sectors of the community", said Green.

The Resource Recovery Facility proposed by Energy Answers has the capacity to process approximately 2,100 tons of municipal solid waste per day and produce approximately 80 megawatts of alternative renewable energy. The project represents the creation of over 4,000 direct jobs over the course of the 36 month construction process, and once in operation, the creation of 150 full-time direct green jobs. In addition, this combined economic activity will generate opportunities for thousands of indirect and induced jobs, and for the acquisition of goods and services from within the region.

Energy Answers International has offices in Albany, New York; San Juan, Puerto Rico; St. Croix, U.S. Virgin Islands; and Baltimore, Maryland to pursue new project development opportunities.
